# Electionware®

Election Management Software

Build elections in less time

Easy workflow enables end-to-end election management, from capturing data, laying out ballots and configuring equipment to loading and reporting results.

Find answers easily

Interactive, comprehensive Quick Help, available in all areas of Electionware, empowers users to easily find answers to common questions.

Ensure consistent data

Intuitive navigator toolbar helps users organize their work and see data quickly.

Create error-free elections

Robust election management software guides users through creating the election, ensuring that all election data, security codes and machine settings are added correctly to the election definition.

Easy to master

Jurisdictions of all sizes can manage their elections through Electionware's easy-to-understand, user-friendly interface. Users find the software easy to navigate because its design is based on actual election workflow. The software accommodates early and overseas voting, Americans with Disabilities Act compliance, ballot adjudication and write-in support, and election night reporting.

What's in it for election officials?

- **Intelligence**
  Real-time election data queries and reports; workflow management and error alerts; enforced data accuracy; user customization; tracking of election media; helpful status indicators for incoming results.

- **Productivity**
  Fast data import; reuse of election and ballot layout templates; simple translation and audio file management; multiple simultaneous users; ballot image filtering, viewing and printing.

- **Power**
  Management of thousands of ballot styles and precincts; incorporation of many languages; deployment of multiple levels of security.

Built for election management

Work Simultaneously
Electionware's multiuser functionality allows multiple authorized election personnel on a closed-network system to prepare precinct flash drives simultaneously or load results while running reports, even on different elections.

Ensure Electionwide Uniformity and Compliance
Electionware uses one database to support multiple equipment types, manages nearly 15,000 ballot styles and just under 10,000 precincts, and supports numerous languages. The software also contains and deploys multiple levels of security configurable to jurisdiction requirements.

5 comprehensive election management software groups

Electionware gives election administrators the software tools needed to:

- Create elections
- Design ballots
- Configure digital tabulation and accessible equipment
- Manage election results data
- Generate custom results reports

These tasks are coordinated through Electionware's five software groups, each representing a stage of the election process.

Each group includes modules that handle specific functions for setting up an election and processing results — all of which can be configured.

Define	• Capture jurisdictional election data • Import all election data
Design	• Design paper ballots • Lay out touch-screen ballots to display single or multiple contests per screen in a variety of formats or layouts. • Configure accessibility settings
Deliver	• Set equipment access and configurations • Package data onto flash drives for use with voting system equipment and pollbooks • Print and review ballots with ES&S' Ballot on Demand Solution
Results	• Load election results • Adjudicate ballots and write-ins • Configure and generate reports
Manage	• Control user access • Set security code complexity
