

# ExpressTouch™

*Electronic Universal Voting System*

## 15" HD Touch Screen

The compact unit's large screen allows many ballot layout options using Electionware's Touch Screen Ballot module.

## Integrated Internal Battery Backup

The internal backup battery lasts up to 8 hours. It charges any time the unit is docked in a powered voting booth or directly plugged into a standard outlet.

## Fully ADA-Compliant

Accounts for full range of human diversity, including physical, perceptual and cognitive abilities.

## Privacy Panels

Panels integrated into the booth for voter privacy.

## Report Printer

Print zero reports and results tape.

## Leg Stabilizers

Allow for compact design and greatly improves stability compared to standard voting booths. ExpressTouch also functions as a table-top unit.

VOTE  
SESSION ACTIVATOR

The ExpressTouch uses smart card technology to activate vote sessions and facilitate administrative functions. Data contained within each smart card is encrypted and can only be read by an ExpressTouch configured for that election. The smart card is programmed for each voter and ensures that the voter's correct ballot is displayed each and every time.

# ExpressTouch Key Features

ES&S has combined our extensive industry knowledge with customer feedback to create the ExpressTouch — an Electronic Universal Voting System that provides an enhanced touch screen voting experience within a portable tablet.

## FLEXIBLE

The 15-inch touch screen and Electionware® full-featured ballot layout manager enable the ExpressTouch to display many contests and candidates in a compact profile.

## RELIABLE

The internal backup battery lasts up to 8 hours, and charges any time the unit is docked in a powered voting booth or directly plugged into a standard outlet. It exceeds the VVSG 1.0 reliability and durability standards.

## SECURE

The ExpressTouch not only encrypts all election data and totals, but it provides a real-time audit trail for all events, including their time and date stamps, saved to the USB flash drive.

The operating software provides security access controls to limit and detect access to critical system components, guarding against system integrity loss and availability. This maintains confidentiality and provides accountability for each unit. Each units' hardware was designed to protect against tampering during system maintenance, or interventions in system operations, and in response to system failure. In addition, system access during equipment preparation, testing and operation is limited by physical locks, access codes and smart cards.

## LIGHT AND PORTABLE

The ExpressTouch voting booth collapses into a self-contained transport and storage case for the tablet. All components, including the ExpressTouch tablet, report printer and portable booth, only weigh a combined 26 pounds.
